Press Release

Dated: 01 October 2020

Sub: Performance of Monsoon 2020 in Tripura.

South-west monsoon season (1st June to 30th September) is the primary rainy season for most parts of India. In Tripura, about 60% of the annual rainfall occurs during this season.

During June to September this year, rainfall observed in Tripura was 1292.9 mm, against the normal value of 1457.8 mm, with 11% less rainfall than normal.

The month wise distribution of rainfall in Tripura is shown in Table 1:

Month	Observed Rainfall	Normal Rainfall	Departure	Category
June 2020	465.6	460.1	+1%	Normal
July 2020	350.7	402.8	-13%	Normal
August 2020	176.5	340.9	-48%	Deficient
September 2020	300.1	254.0	+18%	Normal
Jun – Sep 2020	1292.9	1457.8	-11%	Normal

Table 1: Month wise Rainfall distribution in Tripura

Legend

 Large Excess: +60% or more	 Excess: +20% to +59%	 Normal: +19% to -19%
 Deficient: -20% to -59%	 Large Deficient: -60% to -99%	 No Rain: -100%
